

Minecraft Digital Guardian's Test 1 Brief

Task:

Recreate World 1 in a new Minecraft file (creative world, not survival). This is to avoid any accidental or destructive coding on the original file. Follow the script, determined by the research team and elders, to design the level. The reason we are doing World 1 is that we want to ensure you can perform the mechanics based on viewing a premade video recording of it as a reference.

Platforms:

Minecraft Education - <https://education.minecraft.net/en-us>

Voxel - beta.voxelearth.org

Video recording of World 1 to recreate:

Sent you a PRIVATE video to your Gmails. DO NOT share.

Script to guide your game narrative:

Player enters the first land and is greeted by the White Bear - White Bear: "Welcome to the Forest of Secrets!"
Fox: "Translated: Young ones - before you go to your final challenge, you must first collect 3 chests of tobacco scattered across this land... Once you have collected the chests, you will find the meeting place and offer the tobacco to each of the spirits in exchange for their secrets. They will then ask you if these secrets should be kept safe or shared. Once you have decided which one to protect, if you are right, an item will appear that you are to pick up and then go to the portal to the next land. Good luck young one!"
(To find the hidden chests, the player must navigate the waterways) White Bear: "Take this canoe to search the land for offerings of tobacco."
As the player interacts with the signal fires and searches the landscape, a message appears on the screen. System Overlay: "Tobacco is considered a sacred medicine"
Once the 3 tobacco leaves are collected, the player travels to the Spirit Village where the spirits are guarding chests.
The player opens the book held by the White Bear White Bear : "Should I share this knowledge?" Book Text: "My password to my email is Whitebeariscool2000" The player must click "Protect it!"
The player opens the book held by the Fox. Fox: "Should I share this knowledge?" Book Text: "My favourite sport is hockey and I am a fan of the Edmonton Oilers" The player clicks "OK to share".
The player opens the book held by the Cow. Cow : "Should I protect this knowledge?" Book Text: "My address which I post online is 6488 Moo Moo lane." The player must click "Protect it!"
After making the choices, white tents appear over the books. A final challenge begins as "Mischievous Shadows" (dark figures) try to steal the info. White Bear : "The mischievous shadows are coming! Have you made sure the animals' secrets are safe? If you protect the secrets successfully, you will earn an Eagle Feather and the portal to the next land will unlock." By correctly identifying what to protect, the player defeats the shadows and earns the Eagle Feather, allowing them to move to the next level.

Text and Audio:

You can place the script as text, later on we will replace these with audio files.

Notes:

I highly encourage you to find YouTube videos and demos of mechanics you are unfamiliar with, and try your best to do it. We understand that some of your innovative ideas may not be feasible in Minecraft. In this case, we can communicate that to the team and adjust accordingly. World 1 has a few bugs, such as the wrong Spirit Guides being used, but other than that, it should not have any “impossible” mechanics as it was able to be made by Dave’s nephew!

Saving and Export:

Be prepared to show your screen and share your game play to Dylan. Given the timeline, we would like to see each of your versions of World 1 on **Monday February 2nd at 11am** over a Teams call.

Next Steps:

Once we have a server, with a scanned topography of White Bear, we will move all of your mechanics into the World 1 area (reference the map in the appendix) so ensure your builds are transferable and can be recreated if needed. For the actual game, we hope to have both of you work on the same server concurrently and build out all 7 Worlds (levels) in their respective areas with the ideas from the hackathon, and the script from the elders.

Compensation

We will be paying you an honorarium for your time on this level. And if successful, will hire you for a paid work study position!

Remember:

Have fun!
